

TOPFLIGHT INNOVATIONS

Fire Extinguisher & Suppression

Topflight Corporation has been manufacturing labels for the fire extinguisher and suppression market for more than 40 years. Printed conventionally, our constructions have always met Underwriters Laboratories /Canadian Standards Association requirements. However, we have recently earned UL recognition and CSA approval on our digital labels also, when using preferred constructions!

Digital printing provides the flexibility to print variable content beyond the standard serialization and barcodes, all in the same pass, reducing your cost and time to market. Multi-sku and low volume runs become more efficient, and making any necessary label samples for your UL qualification is effortless. Print only what you need, when and how you need it!

Our top quality security feature is designed to withstand not only tampering, but the harshest of environments, offering the most cost-effective means to secure your product, ensure authenticity, and warn and inform your customer.

When looking for UL/CSA certified labeling, Topflight offers online information featuring a variety of available constructions which can be searched against the exact specifications of any project for suitability and approval. If you cannot find a material that fits your application, just contact us. We can definitely construct one for you.

Topflight has a vast selection of pre-approved UL and CSA materials, printed conventionally or digitally, to meet all of your fire suppression requirements.
